AI adoption workshop

We run a two-hour remote session for up to ten staff using three approved work scenarios.

Who it helps

Operations and systems owners

The problem to solve

An adoption workshop is easier to apply when examples come from work the participants are authorised to do.

Working through the brief

1. **Select three approved work scenarios**

   Gather the agreed inputs. Approved examples, permitted source material and the named human reviewer.

2. **Lead the remote exercises**

   Track “Approved scenario” and “Review question” together so the reviewer can connect the source information to the result.

3. **Discuss review decisions**

   Use the exercises to agree which tasks are suitable and where the team should retain human review.

4. **Check the scope at handover**

   Platform, AI usage and connector subscriptions are separate.

Worked example

Have participants review one AI-generated draft against an approved source and explain what they would change.
