Store migration inventory

We inventory up to 100 products and 30 pages and map what must migrate, redirect or retire.

Who it helps

Merchants and online retail teams

The problem to solve

Store migrations can lose valuable pages and duplicate products when teams copy assets without deciding what belongs in the new store.

Working through the brief

1. **Inventory products and pages**

   Gather the agreed inputs. A store URL or platform brief, current setup and launch requirements.

2. **Decide what moves or retires**

   Track “Source page” and “Migration decision” together so the reviewer can connect the source information to the result.

3. **Map URLs for checking**

   Use the inventory to brief the migration team and check redirects before customers reach old links.

4. **Check the scope at handover**

   Subscriptions, platform fees, advertising and fulfilment charges are separate.

Worked example

Two variants share an old identifier. Flag the collision in the migration inventory before creating the import file.
