Digital bundle configuration

We configure three bundles from existing products with component rules and a test-order record.

Merchants and online retail teams

The problem to solve

A digital bundle can appear ready while entitlement or component rules still cause a test order to behave incorrectly.

Working through the brief

1. **Confirm bundle components**

   Gather the agreed inputs. A catalogue export, field conventions and sample product assets.

2. **Configure approved component rules**

   Track “Bundle identifier” and “Component rule” together so the reviewer can connect the source information to the result.

3. **Verify a test order**

   Use the test record to confirm what customers receive for each bundle before you offer it to buyers.

4. **Check the scope at handover**

   Subscriptions, platform fees, advertising and fulfilment charges are separate.

Worked example

A bundle includes three files. Confirm that a test purchaser receives all three and that each link opens the intended version.
