Drawing issue comparison

We compare two revisions of one drawing and deliver an annotated change log.

Who it helps

Product teams and small manufacturers

The problem to solve

Important technical changes can be missed when revisions are described by a filename or issue number alone.

Working through the brief

1. **Align the two drawing revisions**

   Gather the agreed inputs. Client-approved sketches or drawing revisions, units and intended reference use.

2. **Trace visible differences**

   Track “Drawing location” and “Revision difference” together so the reviewer can connect the source information to the result.

3. **Prepare an annotated change log**

   Use annotated comparisons to tell reviewers what changed and where to look in the approved source files.

4. **Check the scope at handover**

   Reference work from approved inputs. Site checks, production release and independent sign-off are separate.

Worked example

Two drawing issues look similar. Compare the marked revision areas and record the affected features for review.
