General arrangement *drawing*

We arrange up to ten client-specified items on one reference drawing using supplied dimensions.

Who it helps

Product teams and small manufacturers

The problem to solve

Teams discussing a layout can make incompatible assumptions when item positions and dimensions are shared in separate sketches.

Working through the brief

1. **Confirm the specified items and dimensions**

   Gather the agreed inputs. Fully dimensioned approved inputs, units, required scale and output format.

2. **Prepare the reference arrangement**

   Track “Specified item” and “Supplied dimension” together so the reviewer can connect the source information to the result.

3. **Record assumptions for review**

   Use the arrangement drawing as a shared reference for an appropriately qualified reviewer.

4. **Check the scope at handover**

   Reference work from approved inputs. Site checks, production release and independent sign-off are separate.

Worked example

A layout shows the footprint but omits access space. Identify the missing reference before the arrangement review.
