Product render set

We deliver three neutral-background images from one supplied clean CAD model.

Who it helps

Product teams and small manufacturers

The problem to solve

A clean CAD model can be difficult for buyers or reviewers to interpret without accessible views of key features.

Working through the brief

1. **Check the supplied model**

   Gather the agreed inputs. Approved geometry, dimensions, component files and preferred views.

2. **Agree three useful camera views**

   Track “CAD model revision” and “Camera view” together so the reviewer can connect the source information to the result.

3. **Deliver neutral-background renders**

   Use the rendered views in a review or product discussion while keeping the CAD file as the technical reference.

4. **Check the scope at handover**

   Reference work from approved inputs. Site checks, production release and independent sign-off are separate.

Worked example

A product concept needs two review angles. Agree the views and finish reference before preparing the renders.
